

DOMELock

The **Domelock**, is a security device that attaches directly to the operating nut, commonly used for fire hydrants. The center post allows the dome lock to spin freely, while keeping the operating nut secure. The free spinning feature increases difficulty during an unlawful use attempt, as it makes it harder to retain a grip. This is a cost effective lock option that can be removed with the Hydra-Shield Domelock Wrench.

DOMELock WRENCH

The **Domelock Wrench** has been ergonomically designed with a convenient swing handle and works exclusively with our patented Domelock.

Material: Mild Steel 1016 and heat treated 48/50

Coating: Zinc Plated
