

# PLUG LOCKS

The **Water Meter Lock** is a security device to prevent the unauthorized use of non-paying customers. **There are two separate locks uniquely engineered to fit either the angle or the curb stop valve.** The lock is a plug which is placed into the valve by means of a specially designed wrench.

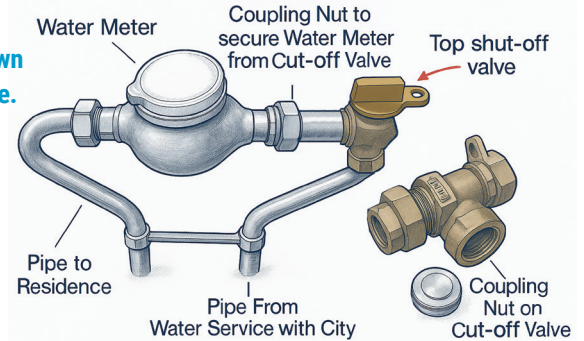

The plugs are made in two thread dimensions, pipe thread and meter coupling thread. **The valve determines the plug lock to be used.** An angle valve is designed to fit coupling thread and the curb stop is designed for a pipe thread. Curb stop valves are internally threaded, while angle valves have a coupling nut that attaches to the meter. Our plug locks are designed in 3 sizes: .75", 1.0", and 1.25"

**THE WATER METER WRENCH** is designed to be used exclusively for the installation and removal of our water meter locks. It can be used on multiple sizes and variations of plug locks.

Illustration shown is an angle valve.
