

# CUSTODIAN HYDRA SHIELD

## HYDRANT SECURITY LOCK

The **Custodian Lock** is a patented water-distribution security device that adapts to the operating nut of any fire hydrant or similar component. It attaches directly to the operating nut—without disassembly—regardless of make, model, or style. Its free-spinning, armored housing fully protects the nut, and only authorized personnel can open the hydrant using the specially designed magnetic key wrench that lifts the activator lock.

The **Custodian Lock Wrench** is engineered to work exclusively with the patented Standard Custodian Hydrant Lock. This multi-functional tool also fits specific sizes and shapes of various steamer caps, providing easy access to hydrant ports.
